# **ECONOMICS** — HONOURS

## Paper : CC-4

## Full Marks : 65

The figures in the margin indicate full marks. Candidates are required to give their answers in their own words as far as practicable.

#### **Group-A**

#### 1. Answer any ten questions:

- (a) If y = ax<sup>b</sup>, find the elasticity of y w.r.t. x.
  (b) What do you mean by comparative statics in economics?
  (c) Let a person's preference for biscuits (x) and tea (y) could be represented by the utility function u = xy. When he is consuming 10 units of biscuits and 20 units of tea, how much tea will he be ready to sacrifice to get one additional unit of biscuit?
  - (d) Show that the expenditure function  $E = 2p_x^{0.5}p_y^{0.5}u$  is homogeneous in prices. 2
  - (e) The expenditure function is given by  $-E(P_x, P_y, M) = 2\sqrt{u^*P_xP_y} 2P_x P_y$ ; where  $P_x$  and  $P_y$  are the prices of the two commodities and  $u^*$  is the target level of utility. Find the compensated demand functions for the two commodities. 1+1
  - (f) Examine whether the function f(x, y) = xy is quasiconcave or quasiconvex.
  - (g) Show that the quadratic equation formed by the following matrix product is negative definite.

$$\begin{bmatrix} x & y \end{bmatrix} \begin{bmatrix} -2 & 3 \\ 1 & -4 \end{bmatrix} \begin{bmatrix} x \\ y \end{bmatrix}$$
 2

- (h) State the Shephard's Lemma.
- (i) What does the Euler's theorem state?
- (j) Examine whether the following paths are oscillatory/non-oscillatory and convergent/divergent-
  - (i)  $y_t = -3\left(\frac{1}{4}\right)^t + 2$ (ii)  $y_t = 3^t + 1$  1+1
- (k) Find the value of a function  $f(x) = x^3 6x^2 + 12$  at the point of inflexion. 2
- (l) What is a convex set?

(2)

- (m) State whether the following statements are true or false and correct the false statement(s)–
  - (i) A concave function is also quasiconcave.
  - (ii) A linear function is neither quasiconcave, nor quasiconvex.
- (n) What do you mean by dynamically stable equilibrium?
- (o) A farmer had a certain length of fence *P* and wished to enclose the largest possible rectangular area. Form the Lagrange function for this constrained optimisation problem.

### **Group-B**

#### Answer any three questions.

- 2. Given a continuous income stream at the constant rate of Rs. 1,000 per year, what will be the present value of return if the income stream lasts for 2 years and the discount rate is 0.05 per year.
- 3. The consumption function is given by  $C = 4141 + 0 \cdot 78Y$ ; National Income Y = C + I. Find the value of the investment multiplier and interpret the result. 4+1
- 4. An economy produces two goods x and y using labour as the only input. The Production Possibility Frontier for the two goods is given by  $x^2 + 0 \cdot 25y^2 = 200$ . The production function for goods  $x: x = L_x^{0.5}$  and the production function for goods  $y: y = 2L_y^{0.5}$  (where  $L_x$  and  $L_y$  are the quantities of labour used in x and y production respectively). Total amount of labour available is 200 units. If labour is equally allocated between x and y, determine the quantities of x and y produced. Also determine the trade-off between x and y as exhibited by the Production Possibility Frontier. 2+3
- 5. From the differential equation  $\frac{dy}{dt} + ay = b$ , determine the time path of y where a and b are non-zero constants. 5
- 6. Consider the following function:

 $y = 4x_1^2 - x_1x_2 + x_2^2 - x_1^3$ 

Determine whether the stationary point is a maximum, minimum or saddle point.

#### **Group-C**

#### Answer *any three* questions.

7. (a) Consider the following model—

$$C = C(y,r), I = I(y,r)$$
$$y = C + I + G$$
$$M^{D} = L(y,r) M^{S} = \overline{M}$$
$$M^{D} = M^{S}$$

Find the effect of change in G and  $M^S$  on y and r. Assume  $C_y + I_y < 1$ . [Symbols have their usual meaning]

1+1 2

5

(b) The demand and supply equations are given by—

D = a - b(P + t)

$$S = \alpha + \beta P$$

π

Where *P* is the price, *t* is the tax rate and  $a, b, \alpha, \beta$  are positive constants.

Compute  $\frac{dP}{dt}$  by implicit differentiation and interpret the result. 6+(3+1)

- 8. (a) Examine whether the following functions are homothetic—
  - (i) f(x, y) = xy + 1
  - (ii)  $f(x, y) = 3 \log x + 4 \log y$
  - (b) Consider the following production function for transportation in a particular city-

 $Q = \alpha L^{\beta_1} F^{\beta_2} K^{\beta_3}$ ; F=fuel in gallon; K=capital in number of buses; L=labour input in worker hour and Q=output in millions of bus miles.

Given that  $\alpha = 0.0012$ ,  $\beta_1 = 0.45$ ,  $\beta_2 = 0.20$  and  $\beta_3 = 0.30$ ,

- (i) Determine output elasticities for labour and capital.
- (ii) If labour increases by 10%, by what percentage will output increase?
- (iii) If every year 3% of the buses are taken off what effect will it have on output?  $(2\frac{1}{2}+2\frac{1}{2})+(1+1+1\frac{1}{2}+1\frac{1}{2})$
- 9. (a) Construct an indirect utility function for the direct function  $u = \log x_1 + \log x_2$ . Verify the Roy's Identity.
  - (b) State the significance of Lagrange Multiplier.

#### **10.** (a) Consider the following linear programming problem—

Maximise profit  $\pi = 2x_1 + 5x_2$  subject to  $x_1 + 4x_2 \le 24$ ,  $3x_1 + x_2 \le 21$ ,  $x_1 + x_2 \le 9$ ,  $x_1 \ge 0$ ,  $x_2 \ge 0$ . It is given that optimal solution to the above problem is  $x_1^* = 4, x_2^* = 5$ . Solve the dual problem using the above information.

(b) Solve the following linear programming problem graphically—

$$\pi = 40x_1 + 30x_2$$
  
subject to  $x_1 \le 16$   
 $x_2 \le 8$   
 $x_1 + 2x_2 \le 24$   
 $x_1, x_2 \ge 0$

## T(2nd Sm.)-Economics-H/CC-4/CBCS

11. A consumer has the utility function U(x, y) = x(y + 1) where x and y are quantities of two consumption goods whose prices are  $P_x$  and  $P_y$  respectively. The consumer has a money income of M.

(4)

- (i) Find the Marshallian demand functions for the two goods.
- (ii) Determine the own price elasticity, cross price elasticity and income elasticity of demand for goods x. 4+6
