

**2020**

**MATHEMATICS — HONOURS**

**Sixth Paper**

**(Module - XI)**

**Full Marks : 50**

*The figures in the margin indicate full marks.*

*Candidates are required to give their answers in their own words  
as far as practicable.*

*Symbols have their usual meanings.*

**Group - A**

**[Vector Calculus - II]**

**(Marks : 10)**

1. Answer **any one** question :

(a) Verify Stoke's theorem for a vector field defined by  $\vec{F} = (x^2 - y^2)\hat{i} + 2xy\hat{j}$  in the rectangular region in  $xy$ -plane bounded by the straight lines  $x=0, x=5, y=0, y=8$ ; 10

(b) Prove that for any scalar function  $\phi(x, y, z)$ ,

$$\iiint_V \vec{\nabla} \phi \, dv = \iint_S \phi \hat{n} \, dS$$

where  $\hat{n}$  is the outward drawn unit normal vector to the surface  $S$ . 10

(c) If  $V$  is the region bounded by the planes  $x = 0, y = 0, z = 0$  and  $2x + 2y + z = 4$ , then show that

(i)  $\iiint_V \vec{\nabla} \times \vec{F} \, dV = -\frac{8}{3}\hat{k}$

(ii)  $\iiint_V \vec{\nabla} \cdot \vec{F} \, dV = \frac{16}{3}$  where  $\vec{F} = (3x^2 - 8z)\hat{i} - 2xy\hat{j} - 8x\hat{k}$  6+4

(d) Verify Green's theorem for the line integral  $\oint_C (x^2 + xy)dx + xdy$ , where  $C$  is the bounding curve of the region traced by  $y = x^2$  &  $y = x$ . 10

**Group - B**

**[Analytical Statics - II]**

**(Marks : 20)**

Answer *question no. 2* and *any one* question from the rest.

2. (a) Find the centre of gravity of the arc of the parabola  $y^2 = 16x$  included between the lines  $x = 0$  and  $x = 4$ . 6

**Or,**

- (b) Find the condition of stability of equilibrium of a mechanical system having one degree of freedom. 6

3. A solid frustum of a paraboloid of revolution of height  $h$  unit and latus rectum 8 unit rests with its vertex on the vertex of a paraboloid of revolution whose latus rectum is 4 unit. Show that the equilibrium is stable if  $h < 2$ . 14

4. Forces  $\vec{X}$ ,  $2\vec{X}$ ,  $3\vec{X}$  act along the vectors  $\hat{i} + \hat{j} - \hat{k}$ ,  $\hat{i} - \hat{j} + \hat{k}$  and  $-\hat{i} + \hat{j} + \hat{k}$  respectively. Find the resultant wrench, pitch and intensity. 14

5. A force  $\vec{P}$  acts along the axis of  $x$  and another force  $n\vec{P}$ , where  $n$  is a positive integer, acts along a generator of the cylinder  $x^2 + y^2 = a^2$ . Show that the central axis lies on the cylinder

$$n^2 (nx - z)^2 + (1 + n^2)^2 y^2 = n^4 a^2. \quad 14$$

6. State and establish the principle of virtual work for a system of co-planar forces acting on a rigid body. 14

**Group - C**

**[Analytical Dynamics of a Particle - II]**

**(Marks : 20)**

Answer *question no. 7* and *any one* question from the rest.

7. (a) A particle moves with central acceleration  $\frac{\mu}{r^3}$ . Where  $r$  is the distance of particle from centre of force. If it be projected from an apse at a distance 'a' from the centre of force with a velocity equal to  $\sqrt{2}$  times that in a circle, find the path. 4

**Or,**

- (b) Classify the equilibrium point for the linear system  $AX = \dot{X}$ , where  $A = \begin{pmatrix} a & b \\ c & d \end{pmatrix}$ ,  $X = \begin{pmatrix} x \\ y \end{pmatrix}$  and  $\dot{X} = \frac{dX}{dt}$ ,

for different values of the scalars  $a$ ,  $b$ ,  $c$  and  $d$ . 4

8. A particle of mass  $M$  is at rest and begins to move under the action of a constant force  $\vec{F}$  in a fixed direction. It encounters the resistance of a stream of fine dust moving in the opposite direction with velocity  $\vec{u}$ , which deposits matter on it at a constant rate  $\sigma$ . Show that its mass will be  $m$ , when it has travelled a distance  $\frac{k}{\sigma^2} \left[ m - M \left\{ 1 + \log \left( \frac{m}{M} \right) \right\} \right]$  where  $k = F - \sigma u$ .
- [ $F$  and  $u$  are the magnitudes of the force  $\vec{F}$  and the velocity  $\vec{u}$  respectively]. 16
9. A small bead starts sliding down a semicircular wire of radius ' $a$ ' with coefficient of friction  $\mu$ . If it starts with a velocity ' $u$ ' from one extreme point in the upper end, find the time taken to slide down to the lowest point (Assume that the wire is fixed in a horizontal base with its centre upwards and the diameter of the free ends is horizontal). Also find the increased velocity at that point. 10+6
10. A particle describes an ellipse under inverse square law about a focus. If it is projected with a velocity of magnitude  $V$  from a point at a distance  $l$  from the centre of force, find the periodic time. 16
11. Determine the eigenvalues and corresponding eigenvectors of the following linear dynamical system :

$$\frac{dx}{dt} = 2x + y$$

$$\frac{dy}{dt} = x + 2y$$

Classify its equilibrium points.
